LIST OF CONTENTS

NUMBER 1

S. Krenk and **O. Gunneskov**	1	A triangulation procedure for elastic cross sections with moderate wall thickness
G. N. Vanderplaats and **H. Sugimoto**	13	A general-purpose optimization program for engineering design
J.-H. Chiou, J. D. Lee and **A. G. Erdman**	23	Comparison between two theories of plasticity
G. Venkateswara Rao and **K. Kanaka Raju**	39	A study of various effects on the stability of circular plates
K. S. Surana	47	A generalized geometrically nonlinear formulation with large rotations for finite elements with rotational degrees of freedoms
A. F. Sayegh and **F. K. Tso**	57	Direct evaluation of reaction forces and moments using isoparametric elements
P. N. Andriotaki and **D. E. Panayotounakos**	71	Static analysis of circular continuous beams on *n*-supports of known or elastic deflections
R. A. Chaudhuri and **P. Seide**	87	Triangular element for analysis of perforated plates under inplane and transverse loads
R. A. Chaudhuri and **P. Seide**	97	Triangular element for analysis of a stretched plate weakened by a part-through hole
E. F. Punch and **S. N. Atluri**	107	Large displacement analysis of plates by a stress-based finite element approach
H. C. Chan and **W. C. Chung**	119	Higher order subparametric elements for large deflection analysis of plates
B. Dattaguru, A. C. B. Naidu, T. Krishnamurthy and **T. S. Ramamurthy**	127	Development of special fastener elements
M. Eisenberger, D. Z. Yankelevsky and **J. Clastornik**	135	Stability of beams on elastic foundation
R. A. F. Martins and **R. M. Delgado**	141	Numerically integrated finite elements as assemblies of bars
P. Waldron	147	Sectorial properties of straight thin-walled beams
Y. K. Chow	157	Discrete element analysis of settlement of pile groups

Technical Note

M. Ortiz 167 A note on energy conservation and stability of non-linear time-stepping algorithms

I Software survey section

NUMBER 2

i Announcement

M. El Hadj, Y. Demay and J. L. Chenot 169 A two-grid method applied to plane elasticity

S. Y. A. Ma and I. M. May 177 The Newton–Raphson method used in the non-linear analysis of concrete structures

G. C. Mitchell 187 Overbend prediction for cold-bent beams

K. S. Surana and P. Kalim 197 Transition finite elements with temperature and temperature gradients as primary variables for axisymmetric heat conduction

J.-D. Zhang and S. N. Atluri 213 A boundary/interior element method for quasi-static and transient response analyses of shallow shells

J. S. Gedling, N. S. Mistry and A. K. Welch 225 Evaluation of material models for reinforced concrete structures

R. S. Srinivasan and P. Chellapandi 233 Dynamic stability of rectangular laminated composite plates

Y. S. Feng and F. Moses 239 Optimum design, redundancy and reliability of structural systems

K. Kondoh, K. Tanaka and S. N. Atluri 253 An explicit expression for the tangent-stiffness of a finitely deformed 3-D beam and its use in the analysis of space frames

D. Givoli and I. Levit 273 A solution of one-dimensional moving boundaries problems by the finite-element method

H. Adeli and J. Fiedorek 281 A MICROCAD system for design of steel connections —I. Program structure and graphic algorithms

G. Anagnostides 295 Frame response to a harmonic excitation, taking into account the effects of shear deformation and rotary inertia

J. P. Morrill and D. Wright 305 A knowledge-based program for diagnosing metallurgical failures

K. T. Min and F. X. de Charentenay 313 Optimum weight design of sandwich cylinders with orthotropic facings and core under combined loads

B. J. D. Esping 323 The ALIBABA non-linear optimization package

Announcement

347 Symposium on future directions of computational mechanics

I Software survey section
MODULEF, ASAS-H, ASAS-OFFSHORE, ASAS-HEAT, ASAS-NL, PANDA, BOSOR4, BOSOR5

NUMBER 3

i Announcement

H. V. S. GangaRao and C. S. Putcha 349 Series solutions of structural systems subjected to static and dynamic loads

H. Adeli and J. Fiedorek 361 A MICROCAD system for design of steel connections—II. Applications

R. Rashedi and F. Moses 375 Application of linear programming to structural system reliability

M. Ohga, T. Shigematsu and T. Hara 385 Structural analysis by a combined boundary element–transfer matrix method

Y. Nath, K. K. Varma and D. Mahrenholtz 391 Nonlinear dynamic response of rectangular plates on linear elastic foundation

I. S. El-Sebakhy and J. B. Kennedy 401 Progressive failure analysis of orthotropic bridges

A. Kaveh 413 Ordering for bandwidth reduction

R. D. Cook 421 Stresses in a tensile strip with a large circular hole

D. M. Frangopol and R. Nakib 425 Isosafety loading functions in system reliability analysis

V. Profillidis and P. Poniridis 437 The mechanical behaviour of the sleeper–ballast interface

Y. Frostig and G. J. Simitses 443 Buckling of multi-annular plates

M. N. Pavlović and E. J. Sapountzakis 455 Computers and structures: non-numerical applications

H. Al-Khaiat and H. H. West 475 Analysis of plates by the initial-value method

B. V. R. Gupta, N. Ganesan and S. Narayanan 485 Finite element free vibration analysis of damped stiffened panels

A. F. Sayegh and F. K. Tso 491 Treatment of contact boundaries with friction by direct minimization

H. Adeli and O. Kamal 501 Efficient optimization of space trusses

Technical Note

C. A. Brebbia and J. Trevelyan — 513 — On the accuracy and convergence of boundary element results for the Floyd pressure vessel problem

I — Software survey section

iii — Announcement

N. Endahl — 517 — On the finite element solution of the elastoplastic axisymmetric Hertz contact problem

B. P. Shastry and G. Venkateswara Rao — 525 — Stability of columns subjected to an intermediate concentrated load

C. C. Spyrakos and H. Antes — 529 — Time domain Boundary Element Method approaches in elastodynamics: a comparative study

R. S. Chambers and E. B. Becker — 537 — Integration error controls for a finite element viscoelastic analysis

N. C. Singhal and A. R. Chandrasekaran — 545 — Comparative study of behaviour of some axisymmetric finite elements under static and dynamic loadings

M. A. Tucchio, H. I. Epstein and J. F. Carney III — 559 — An experimental-modal computational technique to find dynamic stresses

R. J. Gu — 571 — Moving finite element analysis for the elastic beams in contact problems

E. Evgin and N. R. Morgenstern — 581 — A nonlinear soil model in ADINA

M. S. Hamid, H. N. Sabbah and P. D. Stein — 589 — Determination of left ventricular wall stresses during isovolumic contraction using incompressible finite elements

W. Sotolongo and D. L. McDowell — 595 — On the numerical integration of elasto-plastic constitutive model structures for nonproportional cyclic loading

R. A. Brockman — 607 — On the use of the Blatz–Ko constitutive model in nonlinear finite element analysis

J. G. Malone, P. G. Hodge, Jr and R. Plunkett — 613 — Finite element mesh for a complete solution of a problem with a singularity

R. D. VanLuchene, R. H. Lee and V. J. Meyers — 625 — Large scale finite element analyses on a vector processor

J. D. Dybbro and N. C. Holm — 637 — On minimization of stress concentration for three-dimensional models

D. T. Nguyen and **J. S. Arora**	645	An algorithm for solution of large eigenvalue problems
M. R. Lajczok	651	New approach in the determination of interlaminar shear stresses from the results of MSC/NASTRAN
J. Mackerle	657	Finite element codes for microcomputers—a review
	I	Software survey section

NUMBER 5

	i	Announcement
C. R. DeVore, H. C. Briggs and **A. R. DeWispelare**	683	Application of multiple objective optimization techniques to finite element model tuning
K. A. Meroueh	691	On a formulation of a nonlinear theory of plates and shells with applications
Y. Ding and **B. J. D. Esping**	707	Optimum design of beams with different cross-sectional shapes
K. R. Leimbach	727	CAL-DIF—finite difference modeling of variational principles aboard CAL
J. D. Chieslar and **A. Ghali**	749	A hybrid strain technique for finite element analysis of plates and shells
G. E. Stavroulakis, C. C. Baniotopoulos and **P. D. Panagiotopoulos**	767	Sea-bed–structure interaction in the presence of frictional effects for submarine pipelines
C. Lakshmanan and **B. Srinivasan**	777	Analysis of test problems used for comparison of Type II stiff ODE solvers
C. T. Dyka and **A. Remondi**	781	An efficient adaptive dynamic algorithm
J. P. Wright and **R. Smilowitz**	791	Uncoupling approximation for the dynamic analysis of structures embedded in hysteretic media
S. S. Rao	799	Automated optimum design of wing structures: a probabilistic approach
J. Vrbka and **Z. Knésl**	809	Optimized design of a high pressure compound vessel by FEM
A. G. Razaqpur	813	Stiffness of beam-columns on elastic foundation with exact shape functions
		Technical Note
Y. Z. Chen	821	A numerical procedure for evaluating the plastic limit load of a circular plate using Mises yield criterion
		Announcement
	823	Sixth International Conference on Mathematical Modelling, St Louis, Missouri, 10–13 August 1987
	I	Software survey section

NUMBER 6

	i	Announcement
H. J. Braudel, M. Abouaf and J. L. Chenot	825	An implicit incrementally objective formulation for the solution of elastoplastic problems at finite strain by the F.E.M.
M. Di Sciuva	845	Evaluation of some multilayered, shear-deformable plate elements
A. B. Chaudhary and K.-J. Bathe	855	A solution method for static and dynamic analysis of three-dimensional contact problems with friction
K. Changizi and A. A. Shabana	875	Pulse control of flexible multibody systems
A. Rutenberg and M. Eisenberger	885	Simple planar modeling of asymmetric shear buildings for lateral forces
C. W. S. To	893	First passage time of discretized plates with geometrical nonlinearity
P. M. Pinsky and K. O. Kim	901	A multi-director formulation for nonlinear elastic–viscoelastic layered shells
R. A. Chaudhuri and K. R. Abu-Arja	915	Plastic deformation of a boron/aluminum tube under multi-axial loadings
M. A. Bradford	923	Inelastic distortional buckling of I-beams
H. K. Stolarski and N. J. Carpenter	935	An alternative formulation of the geometric stiffness matrix for plate elements
H. Scholz and G. Faller	941	A micro-computer program for the elastic–plastic analysis and optimum design of plane frames
S. K. Ray, S. Utku and B. K. Wada	949	Generalization of rectangular element stiffness matrix and thermal load vector associated with $a_0 + a_1x + a_2y + a_3xy$ type interpolation rule
J. W. Joo and B. M. Kwak	953	Analysis and applications of elasto-plastic contact problems considering large deformation
K. S. Surana and P. Kalim	963	Isoparametric line and transition finite elements with temperature and temperature gradients as primary variables for two dimensional heat conduction
		Compendium Papers
J. Mackerle	977	Makebase, an on-line information retrieval system for structural mechanics

Y. Ding 985 Shape optimization of structures: a literature survey

M. Isreb 1005 A unidirectionally stiffened panels database for structural synthesis on microcomputer networks

Technical Note

S. F. Jóźwiak 1009 Application of artificial intelligence notions in structural optimization programs
